

PineApp announces its new PALI™ - PineApp Lawful Interception

09 April, 2008 – PineApp, a global leader in securing networks and email systems, today announced the launch of its new Lawful Interception product.

Lawful interception is the interception of telecommunications by law enforcement agencies (LEA's) and intelligence services, in accordance with local law following due process and proper authorization from competent authorities.

The biggest challenge in email lawful interception resides on the fact that more than 90% of the email traffic is not valid i.e. Spam, Phishing & Viruses. It has become almost impossible to extract information in real-time, as most of the processing time is wasted on analyzing irrelevant content. To make it even harder, using standard anti-spam/anti-virus devices is impossible since the traffic is not directed to the unit, but rather “captured”.

Based on the award winning Mail-SeCure product, PineApp Lawful Interception Solution – PALI™ – offers a complete and flexible end-to-end solution for any infrastructure, filtering all the non-relevant content, thus providing a pinpointed and accurate processing of the relevant information. Mail-SeCure enables real-time content analysis of mail traffic, in addition to or in place of existing content extraction systems.

About PineApp (www.pineapp.com)

PineApp is a leader in securing networks and email systems and offers comprehensive appliance solutions for small, medium and large organisations. Founded in 2002, PineApp is headquartered in Israel, with branch offices in the UK, US, Spain, Italy, France, Russia and South Africa.
