

## **PineApp announces its new ZombiCop™ Product for Zombie Detection**

09 April, 2008 – PineApp, a global leader in securing networks and email systems, today announced the launch of its new ZombiCop™ Product.

Email threats, such as Spam, Viruses and Phishing have become a major concern for organisations. Over 90% of Spam and Viruses are sent through Zombie computers; computers or servers that have been involuntarily compromised by a Virus or Trojan-horse and are used to send out Spam. Until today, the common approach was to add layers of defense on the enterprise and end-user side. However, a new demand has risen to force ISPs to prevent these threats from emerging from their networks.

PineApp ZombiCop™ provides a scalable and cost efficient infrastructure for ISPs, saving bandwidth usage and providing business continuity. With ZombiCop™, unwanted communication is blocked and ISP's mail-servers' blacklisting are significantly lowered. ZombiCop™ not only improves the detection of zombie-based threats and protects organizations, but also improves detection ratio of existing Spam, Virus and Phishing systems.

PineApp ZombiCop™ can be used as a: Passive Inspecting Sniffer, alerting the ISP once a Zombie is detected or as an Active Policy enforcer, blocking or reducing traffic generated from detected Zombie IP, and can also be used as a Smart Traffic Analyzer, adding content inspection layers and the ability to detect other protocols, such as P2P and VoIP.

### **About PineApp ([www.pineapp.com](http://www.pineapp.com))**

PineApp is a leader in securing networks and email systems and offers comprehensive appliance solutions for small, medium and large organisations. Founded in 2002, PineApp is headquartered in Israel, with branch offices in the UK, US, Spain, Italy, France, Russia and South Africa. In the past five years PineApp has specialized in email and content security systems and already has significant presence in more than 50 countries.
